

Assembly Procedure

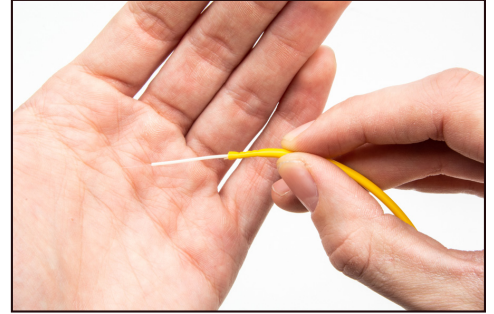

1 Arrange for a FAOC to assemble.

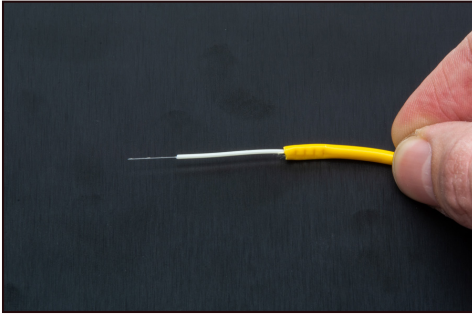

2 Insert screw cap onto optical cable.

3 Strip the coating of the optical cable by at least 45mm.

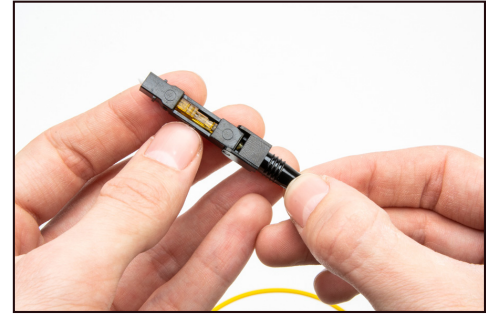

4 Cut off the fiber at the length of 12mm using an optical fiber cleaver.

5 Insert optical cable into the fiber guide on the boot. When optical cable starts to bend, stop inserting.

6 Maintaining the bend, push the connecting holder forward and push the boot cover down.

7 Connect the screw cap with the boot by turning the cap onto the threads.

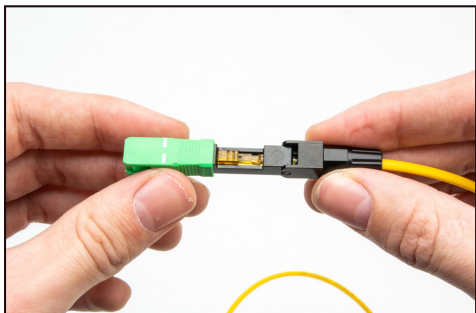

8 Turn the protrusion of the housing towards the bottom and unite it to the body.

9 Complete!

Reassembly Procedure

1 Pull out the housing and separate by unscrewing the screw cap

2 Pull the fiber connecting holder back towards the optical cable and remove the optical cable. Repeat assembly procedure
