Product specification

Leakage sensors are connected to level sensors, such as ENW-E12 (P/N 110308xx), to detect conductive liquids, for example, when a pipe bursts. If an electrically conductive liquid (e.g. water) comes between the two electrodes, an electrical connection is produced, which triggers an alarm in the connected level sensor ENW-E12. Variants: Gray

- Variants:
- LKS1, without wire break monitoring
- LKS-ZD, with wire break monitoring
